## Multipanel Facade System

From high-rise structures to single storey buildings, the Hunter Douglas Commercial Multipanel Facade System provides a robust and smooth exterior solution. The system offers 200, 300 and 400mm panel widths and includes cranked and curved corners that are precisely integrated with the support systems.

Multipanel is available in aluminium and zinc/aluminium coated steel, in a wide range of colours using the HD COLOR-COTE® Coating Process. Two profile sections are also available with each panel width, providing design options for a fine line closed joint or an expressed recessed joint. The various panel widths can be mixed in horizontal, vertical or diagonal formats to provide an infinite array of design possibilities.
